Our Maths/Science incursion on the 10th of October was immensely enjoyed by all students from Year 1 to Year 6. The gym was buzzing with engaged students, teachers and a few parents as they used small planks to solve gigantic problems. All students were challenged and many skills were observed including spatial skills, teamwork, perseverance, determination, creativity, problem solving, compromising, being pushed out of comfort zones and coping with disappointments when creations fell or didn’t quite achieve the plan.

Congratulations to all students who met the challenges that were provided and so enthusiastically worked together to solve many problems in order to achieve success.
